

Composite Lumber:

Mold & Stain Control.

Water Repellency.

Outstanding Durability.

Protection You Can Count On.

Microbial staining and contamination are of concern to consumers and builders alike. Composite building materials protected by the ÆGIS Microbe Shield are mold and mildew resistant.

ÆGIS Means Solutions.

From product development through launch, ÆGIS support includes state of the art microbiological testing, registration expertise, marketing assistance, and complete quality control.

The ÆGIS Quality Control Program is based on a unique visual indicator that binds directly to the antimicrobial agent. It is used for quality control and provides assurance of a uniformly treated surface.

Verification that the composite lumber has been properly treated is quick and easy.

Proven Performance.

Composite decking materials are treated with the ÆGIS Microbe Shield technology under normal process conditions. Anti-fungal properties are measured using the industry standard test method ASTM D3273 and show excellent performance.

Treated samples are protected against a broad range of fungi.

A Cost Effective Solution to Mold.
