LONG LASTING SURFACE PROTECTION

COMMON AREAS AND AMENITIES

PROTECT Surface Protection Program cleans, disinfects and then treats the surfaces that touch our lives with the AEGIS Microbe Shield to provide enduring protection for up to I year.

Step 1: Cleaning & Disinfection

The first step in the Surface Protection Program is to prepare the surface prior to AEGIS treatment. There are 3 different levels of *clean* that our programs can achieve based on your needs.

Cleaning

Cleaning removes microbes, dirt, and impurities. This process does not kill microbes, but by removing them, it lowers their numbers.

Sanitizing

Sanitizing reduces but does not eliminate the population of microorganisms on treated surfaces.

Disinfecting

Disinfectants kill microbes reducing their populations by 99.9999%.

Step 2: Antimicrobial Treatment

Surface Protection for up to 1 Year

Globally registered, AEGIS is the world's most widely used antimicrobial surface treatment.

AEGIS forms a protective coating that molecularly bonds with products upon application and inhibits the growth of microbes on surfaces.

When applied to surfaces, AEGIS forms a colorless, odorless, positively charged polymer that attracts, then electrocutes, ruptures, and disintegrates a microbe's negatively charged cell membrane.

AEGIS has a history of safe use and durability, ensuring long-lasting antimicrobial efficacy.

Our programs are effective on all types of surfaces including glass, fabric, metal, carpeting and plastic.

Common Areas & Ammenities

This program is recommended for areas where people meet in groups. Cleaning, disinfection and AEGIS treatment typically includes the following:

Floors, walls, ceilings, furniture and equipment in common areas and building amenities:

- Gyms
- Theater
- Pool, sauna and spa
- Lounge
- · Board room

- Computer hub
- Games room
- Kitchenette
- Library
- Craft room

1 High-touch

Recommended Annually*

This program treats all high-touch surfaces within selected common area and amenities that are typically touched by hand including equipment handles and touch screens.

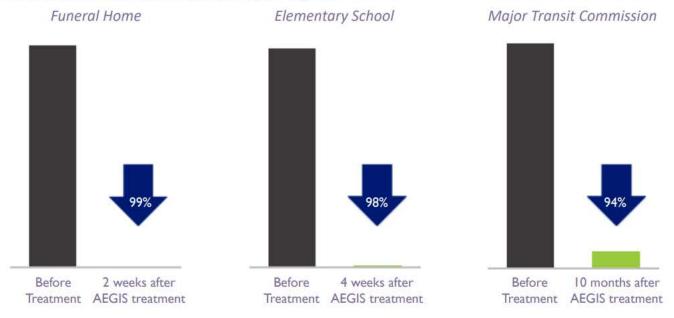

All Surfaces

Recommended Every 2 to 3 Years*

This three-dimensional treatment includes all high-touch surfaces as well as environmental surfaces including walls, floors and equipment surfaces.

Independent Test Results

Testing was conducted by independent labs, showing the sustained decrease in surface microbial contamination. Additional tests and case studies available upon request.

Approvals & Care

AEGIS and the AEGIS Microbe Shield are trademarks of Microban International.

How to Care for AEGIS

- AEGIS bonds instantly and dries in 3 to 5 minutes on high-touch and high-traffic surfaces, 2 to 24 hours on treated fabrics such as carpets.
- AEGIS can be weakened or deactivated over time by highly caustic materials (pH 11+).
- Clean AEGIS treated surfaces with soap and water or non-caustic disinfectants.
- · AEGIS can be removed by abrasion.
